Looking for an all-in one solution to manage your projects with direct interaction with your customers and suppliers?

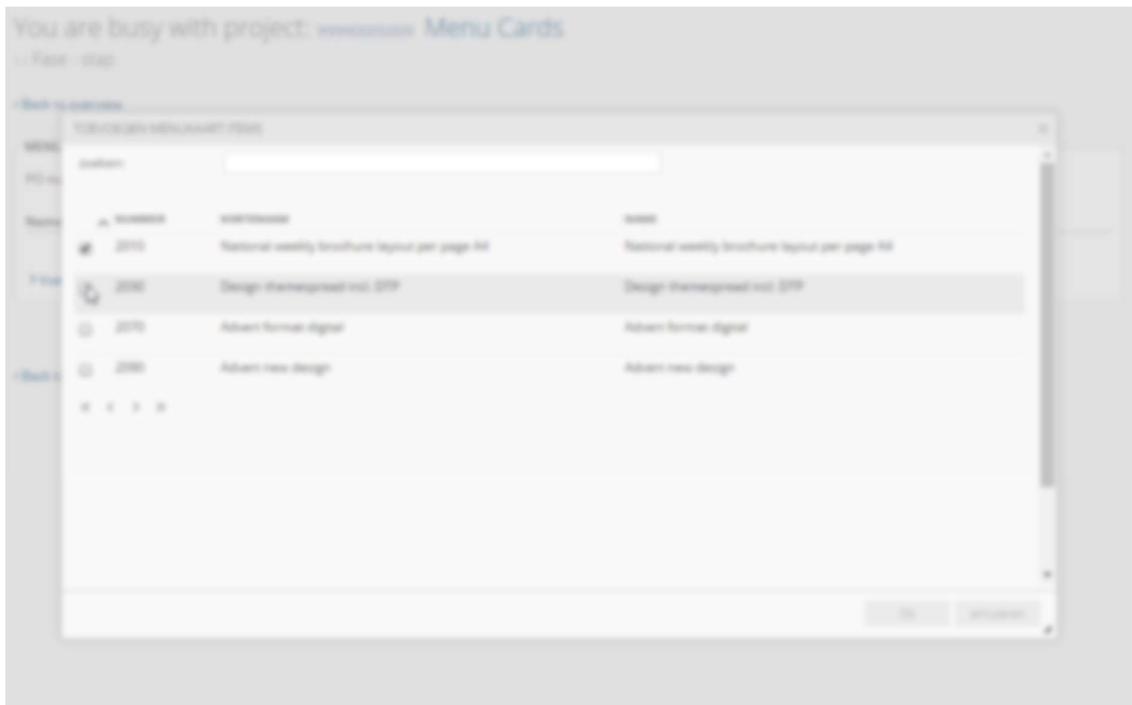

Symsys provides the unique solution.

SYMSYS

SymsysWS and Symsys9: unique combination

SymsysWS is used by large retail organizations to manage all their private label packaging design projects. For example SymsysWS works for almost all supermarket chains in the Netherlands. Unnoticed, because SymsysWS carries the name that our customers give it, like Packman, Yellowman and Eagle. Among others, such as design agencies, marketing departments.
With SymsysWS you are totally in control of all your projects, completely according to your own working processes, everybody involved including your customers and suppliers.

Symsys9 is all out used within the communication industry. By hundreds of agencies, studios, media agencies and more. The all-in-one solution offering all your agency needs: projects, media handling, finance and CRM, front and back office at the same time. From timesheets to invoices.

Attached factsheets give a scope of what SymsysWS and Symsys9 may mean for your organization.

New: menu cards

If you have many repeating jobs (e.g. weekly folders, ads, pos materials, commercial adaptions), each with fixed rates, Symsys has the solution to simplify and reduce costs of handling these jobs.

How does it work? Customers logon in your SymsysWS portal and order what they need, completed with briefing and all. Rates are displayed so a PO may be uploaded instantly. Your project managers are directly informed with new initiated projects. Deploying new projects is made easy using predefined (by you!) work flows.
Everyone involved is informed. The project planning is made. At the same time a quote is generated, may be mailed as a confirmation and is converted into an invoice. All fully automatically.
Tasks from project planning are easily assigned to people using the fully integrated resource planning function. Tasks are displayed on individual dashboards and synchronized with mail clients and smart devices. While completing tasks hours are written.
During the process, the customer will receive drafts to review. Or even better: uses the compare tool. Like a video conference, drafts are reviewed in tandem and approved instantly. All project data and files are updated with no intervention.

Simpler, faster, cheaper
