

Really electronic invoicing saves a lot of time and costs

More and more often customers want to receive e-invoices

Secure XML messages with attached PDF of the physical invoice whether or not containing other attachments (e.g. PO, conformations) are directly booked in their accounting systems.

So, do not hassle any longer by logging on to a billing portal (Tungsten, Basware, Anachron and others) to retype entries and upload files. Creating and sending e-invoices is fully automated and is at least as easy as sending by email or mail.

e-Invoicing is fully integrated in Symsys9.

As in the software packages of dozens of other ERP and accounting software providers.

According to the UBL standard of Simplerinvoicing and via eVerbinding portal.

Receiving e-invoices takes away a lot of work

And reverse: automatic and error-free receiving and processing of e-invoices in Symsys9.

Simple, always up-to-date and complete file of PDFs or purchase invoices.

With a single push of the button, invoices are imported and automatically booked. If invoices need to approved, of course that is possible too.

Also possible: upload to convert PDFs of invoices, sales receipts, even pictures of bills with the scan & recognize service to e-invoices that are imported and booked in the same simple way. Or retrieve e-invoices from other billing portals. Internal charges also become easier because the e-invoice you send is automatically received and booked in another administration.

Get started with e-invoicing today

e-Invoicing, incoming and outgoing, is fully integrated in Symsys9. And easy to implement. How is described on page 16 of the Financial Administration Manual that you can download using the help button in the upper right corner of the Symsys9 program screen. Information on the eVerbinding portal can be found on everbinding.nl.
